July 28<sup>th</sup> 1954

Dear Esther and Josh,

Enclosed is a letter which I sent to Lindegren today. I find his manuscript almost impossible to read, but the general conclusion that no manipulation of the data can satisfactorily account for his excess of 2-strand doubles in regions I and IV (not immediately adjacent to the centromere) is all right. I have written Perkins; maybe he'll send a copy or summary of his remarks on Lindegren's data.

We shall be glad to have a visit with Allison when he comes. I sent some of the probability paper to Neel and will see that Allison gets some also.

The cat is well!

Mrs. Wright is due in town tomorrow to hunt for housing. Ann is going to chauffeur her around.

You will be saddened to hear, if you haven't already, that Gerhard Sander died Saturday. There was a memorial service at the Unitarian Society Monday evening.

Best regards,

Sincerely,

*Jim*

*Bob Wright is to be married Aug 14 in  
Glenview, Ill.*
